

Highly Automated Driving

Current Activities & Further Challenges

Driver Assistance Systems

Ingenieurgesellschaft Auto und Verkehr GmbH

Dr. Frank Schrödel

Chemnitz, May 2017

Agenda

- (1) Introduction to IAV
- (2) Highly automated driving @ IAV
- (3) IAV Development Process
- (4) HAD – High Level Functionality
- (5) HAD – Controller Functionality

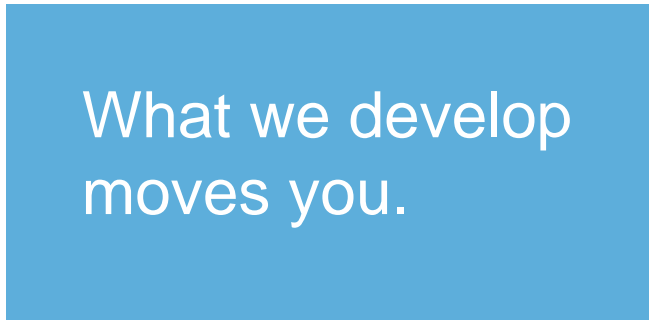

Introduction to IAV

automotive
engineering

iaav

IAV Introduction

Strong Partner for Automotive Engineering

- Uniquely broad spectrum of expertise in the entire vehicle
- An eye for detail and the whole system
- At your side from the initial idea to start of production
- Developing innovations for more than 30 years
- Highly competent developers
- First-class equipment
- Close cooperation with universities and partners
- Reliable and trustworthy
- At your side whenever and wherever you need us

IAV Introduction

Customer Proximity Across the Globe

IAV Introduction

Customer Proximity in Germany

- Development centers
- Development offices

Highly Automated Driving @ IAV

Advanced Driver Assistance Systems & Active Safety

Highly Automated Driving @ IAV

History: ADAS & Active Safety

2003 - 2005

- automated driving at the highway or in similar situations

2006 - 2007

- automated parking based on rear view camera dates

2006 - 2007

- participation DARPA Urban Challenge with the TU Braunschweig in the Team Caroline

Highly Automated Driving @ IAV

History: ADAS & Active Safety

2008 – 2013 – 20XX

Active pedestrian protection

Sensor technology
Camera-based Parking Aid
Semiautomatic

Video-based Parking Aid
Moving object detection

Highly Automated Driving @ IAV

HAD Project

Developing functions for autonomous driving

- Functional definition
- Surrounding sense – programming by using Sensor-Data-Fusion
- Automotive control – modeling strategies
- Functional safety
- System architecture e.g. middleware concepts
- System integration – demonstrator construction and commissioning (technical, functional)
- Validation with test persons

Highly Automated Driving @ IAV

HAD Project

Complete sensor set for 2016

Highly Automated Driving @ IAV

Portfolio: Highway Choiffeur

ACC (Addaptive Cruise Control)

- Object validation of each sensor source
- Object fusion of different sensor sources
- Object classification into dynamic & static objects
- Selection of primary target
- Boost Function and Passing Prevention

ALCA (Automatic Lane Change Assist)

- Lane change based on indicator information
- Consideration of objects in the next lane
- Consideration of lane information

LKA (Lane Keeping Assist)

- Lane centering vehicle behavior based on different lane sources
- Generation of lane information based traffic, road boarders...
- Lane fusion of different camera sources

Highly Automated Driving @ IAV

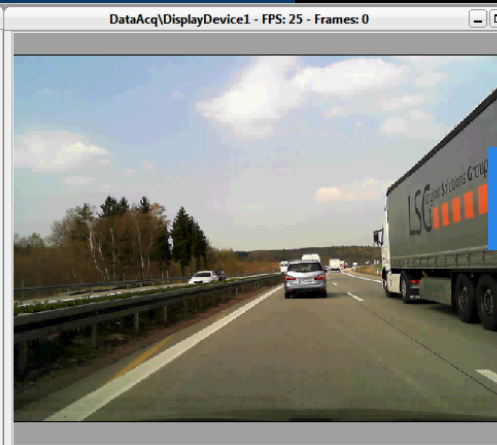

Portfolio: Highway Chauffeur

Driving in reality in highway situation

Highly Automated Driving @ IAV

Portfolio: Parking

Lateral Parking

- Slot detection by ImageVision and/or ScaLa
- Validation/Occupancy of slot by free space
- Plan one move parking path into slot
- Consideration of surrounding objects → objects in our path → vehicle stops

Longitudinal Parking

- Slot detection by ImageVision and/or ScaLa
- Validation/Occupancy of slot by free space
- Plan one move parking path into slot
- Consideration of surrounding objects → objects in our path → vehicle stops

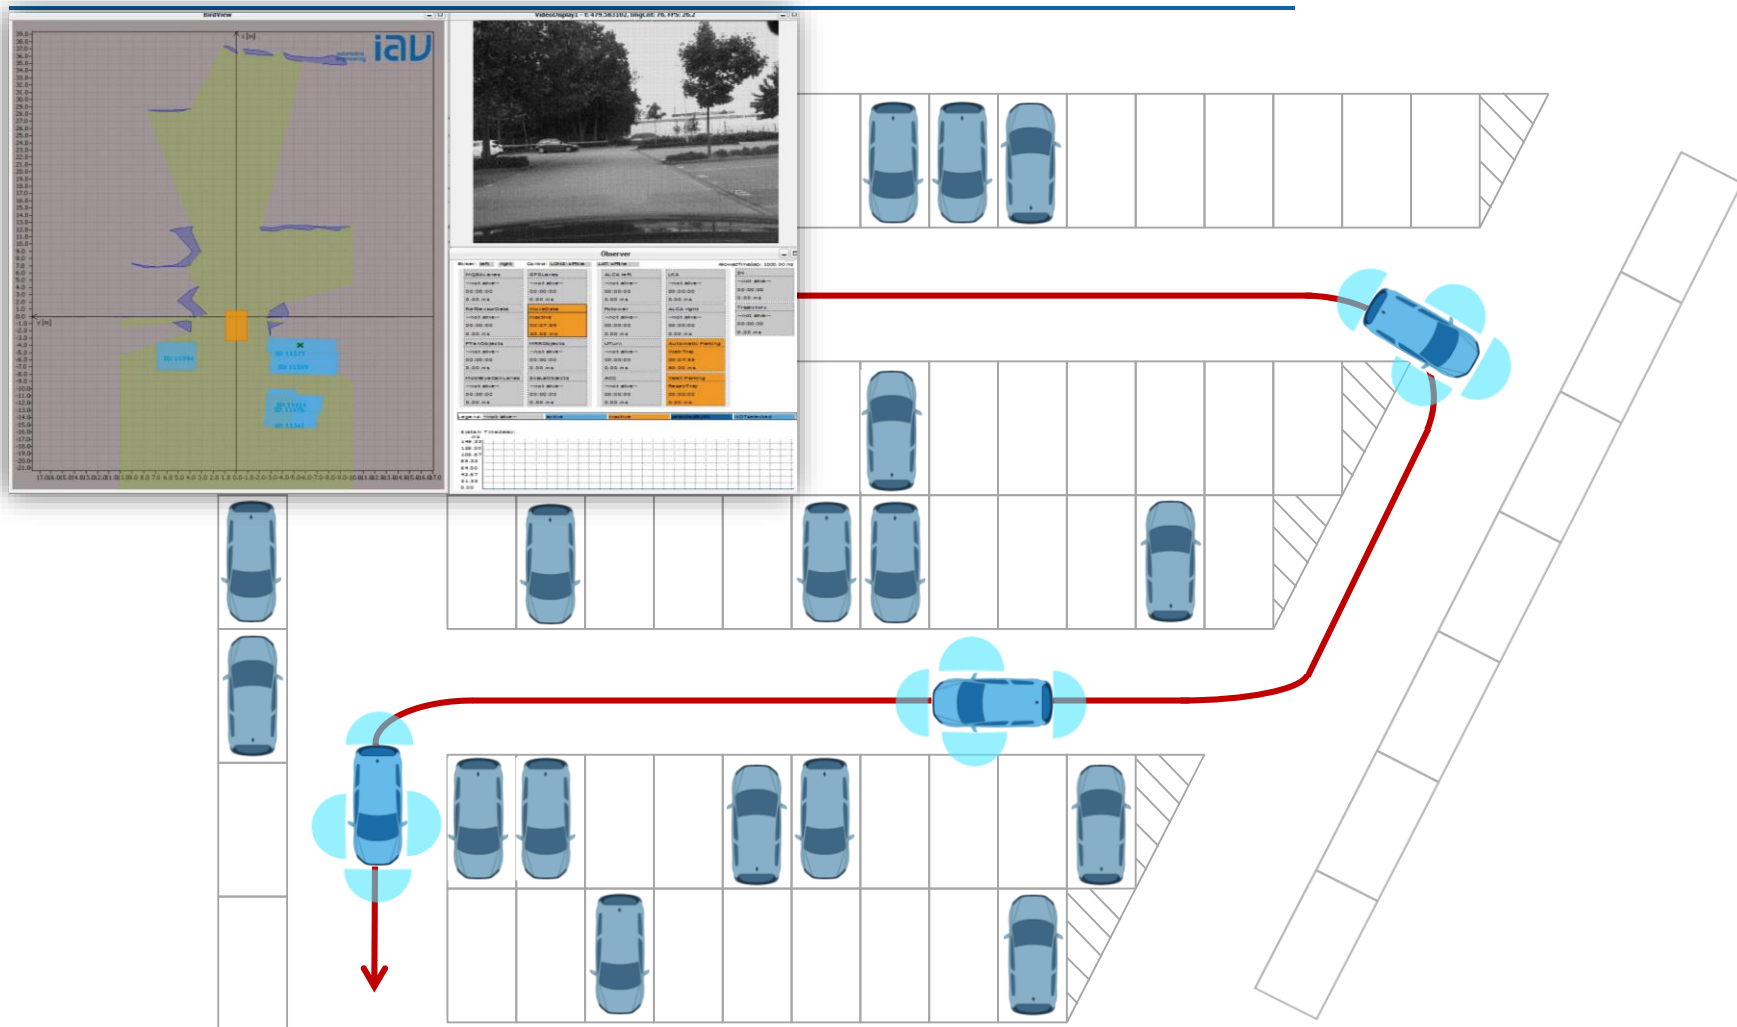

Multiple-move parking

- Handle narrow slots and narrow environment
- Plan multi move path into slot

Highly Automated Driving @ IAV

Portfolio: Parking

IAV Development Process

Advanced Driver Assistance Systems & Active Safety

IAV Development Process

Scene-based Function Development

1. Generation of scenes

- Invest of scenes
- Generation of Sensor data (incl. sough)
- Visualization
- Construction of a scene database

4. Spezifikation of details

Annotation of desired behavior / events

2. Votum of experts

Expert Vote

HAD – High Level Functionality

Advanced Driver Assistance Systems & Active Safety

HAD – High Level Functionality Implementation Concept

HAD – High Level Functionality

Perception – Standard Sensors

Laserscanner

IR Laser LED Array using time of flight measurement

- (+) Great Range and measurement angle: 200m/ 160°
- (+) Classification of Objects
- (-) heavily weather dependent

Automotive Radar

FMCW radar using Doppler effect and time of flight measurement

- (+) robust against most weather condition
- (-) poor data quality
- (-) poor ranges/measurement angle

HAD – High Level Functionality

Sensor Data Fusion

Sensor fusion of radar and camera

- Modeling of measurements and tracks (both have some kind of variance)
- Association of measurements to existing tracks
- Solving of conflict situations

HAD – High Level Functionality

Perception - Image Processing

Range

- Short and long range (0 – 70m)
- Front-, Side- and RearView
- ROI adaptable to speed
- Lane parameter (number)
- Vehicle position in lane

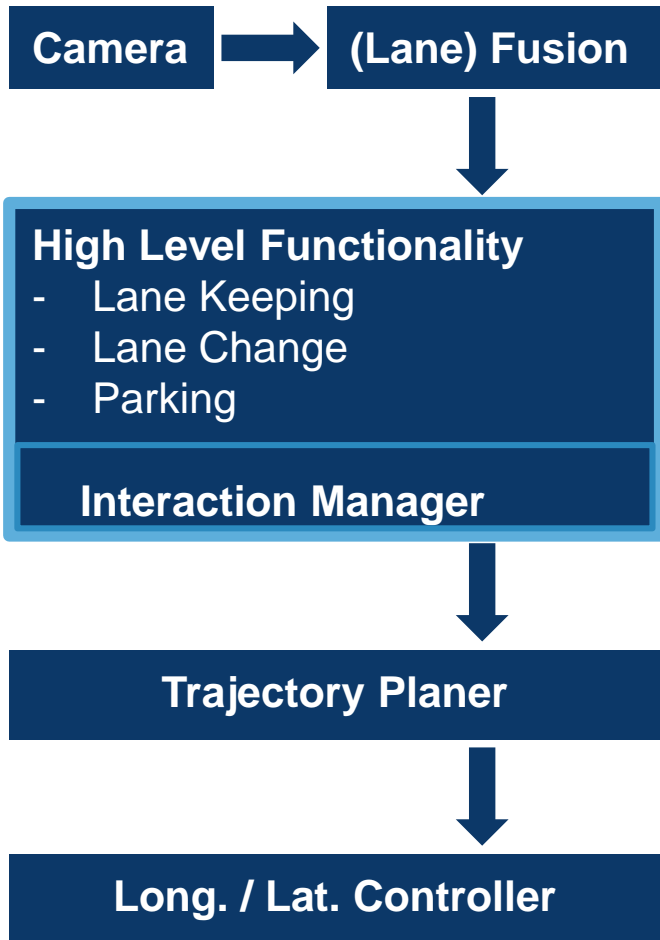

Object and obstacle

- Position
- Size
- Speed and Moving direction
- Classification

HAD – High Level Functionality

Lateral control

- >> Well approach exist
- >> Some expansions are needed

HAD – High Level Functionality ... Inspirations ...

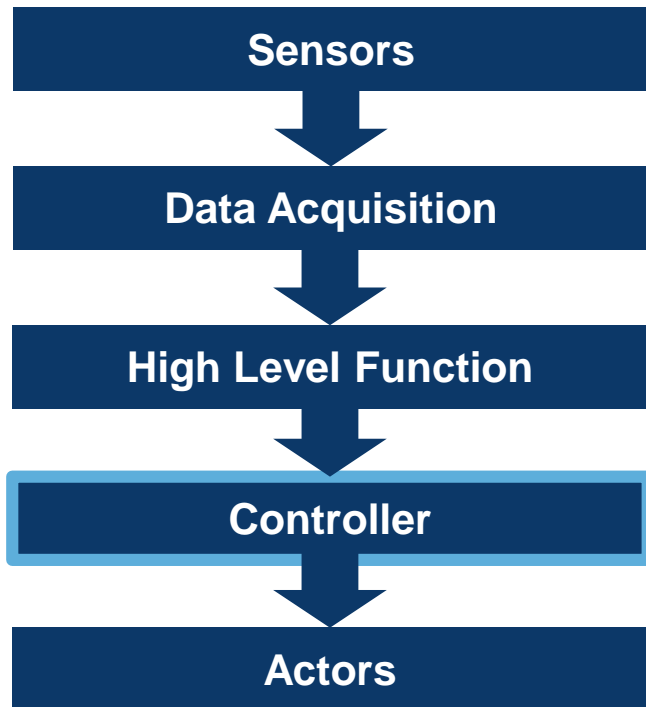

HAD – Controller Functionality

Advanced Driver Assistance Systems & Active Safety

HAD – Controller Functionality Implementation Concept

Controller

Find a sufficient control approach

- A: Looking through a hole in the vehicle floor
- B: Has a system model and is looking forward

HAD – Controller Functionality

Long. dynamic model

A force balance along the vehicle longitudinal axis yields

$$m\ddot{x} = F_{xf} + F_{xr} - F_{aero} - R_{xf} - R_{xr} - mg \sin(\theta)$$

where

- F_{xf} longitudinal tire force at the front tires
- F_{xr} longitudinal tire force at the rear tires
- F_{aero} equivalent longitudinal aerodynamic drag force
- R_{xf} force due to rolling resistance at the front tires
- R_{xr} force due to rolling resistance at the rear tires
- m mass of the vehicle
- g acceleration due to gravity
- θ angle of inclination of the road on which the vehicle is travelling

Different system behaviors for different vehicle speed

HAD – Controller Functionality

Lat. dynamic model

The forces in the direction of the vehicle longitudinal axis provides

$$F_{uh} + F_{uv} \cos \delta_v - F_{sv} \sin \delta_v = mv^2 \chi \sin \beta + m\dot{v} \cos \beta$$

and in the direction of the vehicle transverse axis

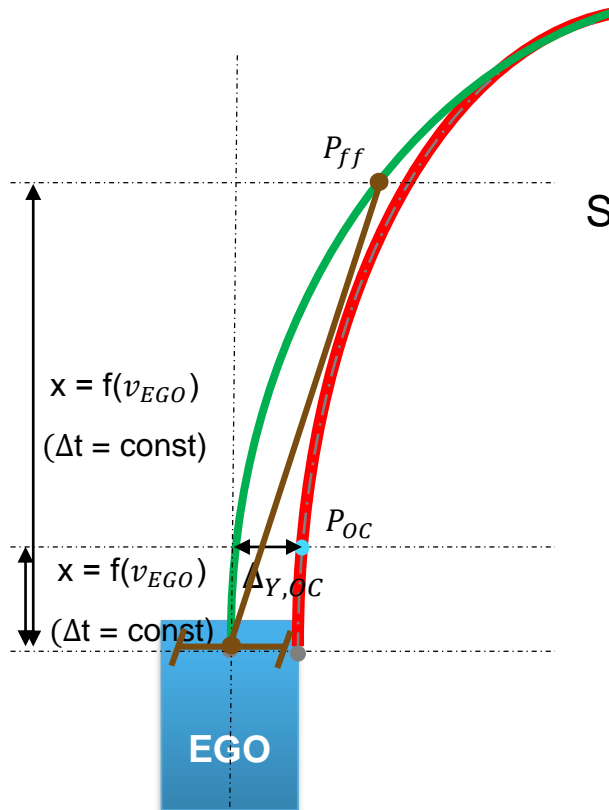

$$F_{sh} + F_{uv} \sin \delta_v + F_{sv} \cos \delta_v - F_w = mv^2 \chi \cos \beta - m\dot{v} \sin \beta.$$

The windpower becomes perpendicular to the vehicle axis. The torque rate in terms of the high axle through the main emphasis provides

$$F_{sv} a \cos \delta_v + F_{uv} a \sin \delta_v = \theta \ddot{\Psi} + M_w + F_{sh} b.$$

HAD – Controller Functionality

Lateral Control

Speed depending length of drawbar

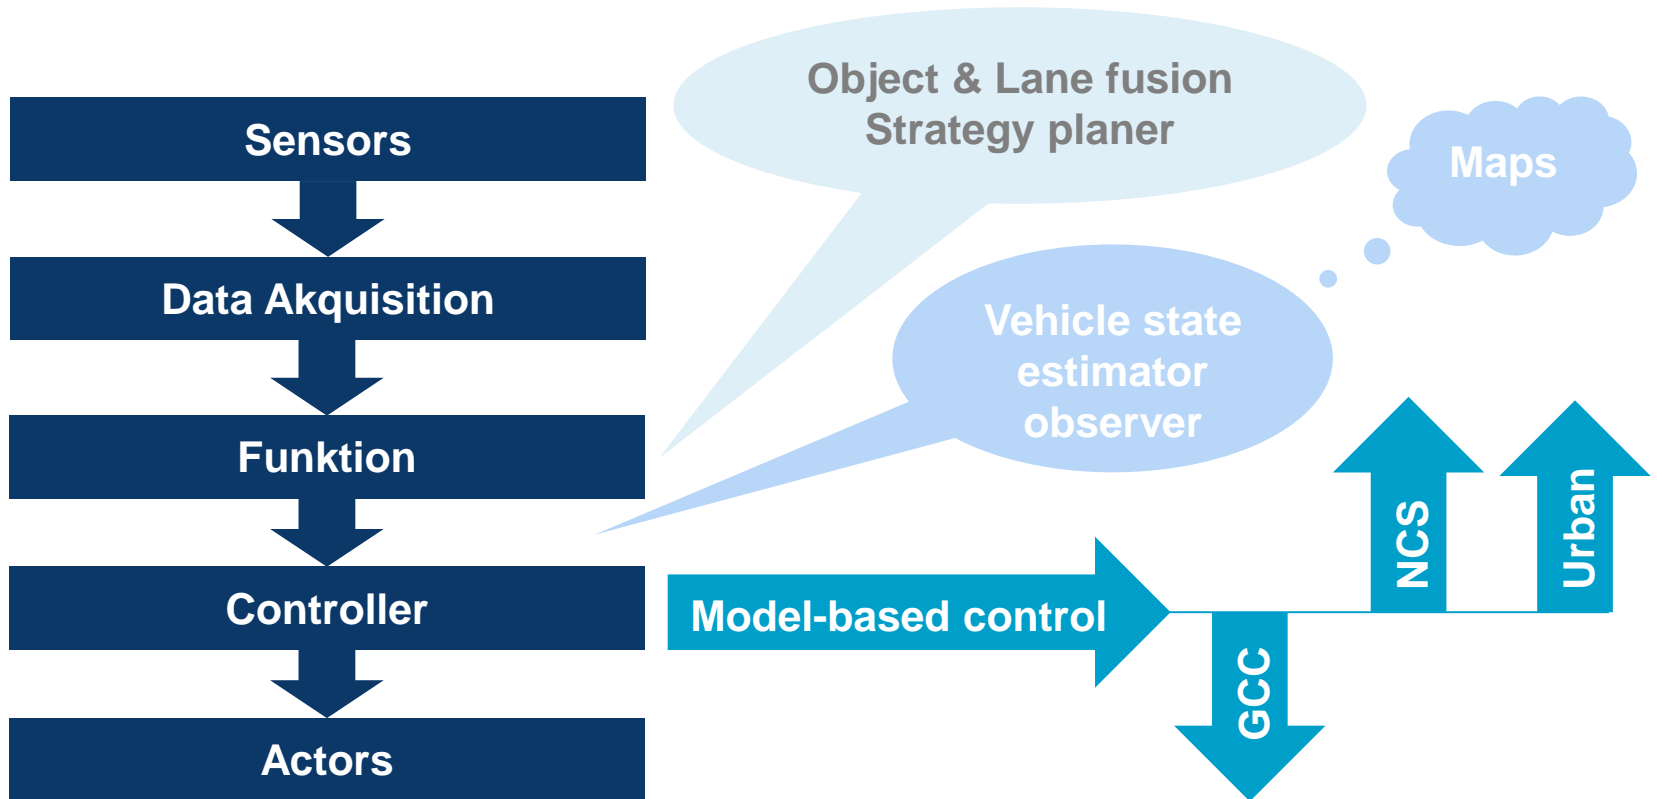

Offset controller: with speed depending preview length (constant timegap to P_{oc})

➤ input: offset of P_{oc} to reference curve

Goal:

- offset compensation
- compensation of disturbances

Thank You

Frank.Schroedel@iauv.de

We offer:

- International environment
- Sophisticated and pioneering tasks with enough space for own ideas
- Flat hierarchies
- Flexible working hours
- Team-oriented work
- Autonomus and independant work in the team
- Assisting in developement projects
- Internships, thesis and graduation work

We want YOU!

Career page

Jetzt einsteigen und Fahrt aufnehmen

Starten Sie doch bei IAV, dem Partner für Automotive Engineering. Wir setzen im doppelten Sinne auf Innovationen der neusten Generation: Engagierte Menschen, die sich als Engineering-Experte profilieren wollen, erhalten in unserem Unternehmen ein Zuhause. Zusammen entwickeln wir die Fahrzeuge von morgen. Mit Leidenschaft und Know-how. Informieren Sie sich hier über Ihre persönlichen Einstiegsmöglichkeiten und Karrierechancen.

Berufserfahrene

Zusammen mit ihren Teams stehen unsere erfahrenen Mitarbeiter für langjährig gewachsene Kompetenz auf allen Ebenen. Unsere Führungskräfte haben eine Menge zu erzählen – lassen Sie sich begeistern.

➤ offene Stellen (155)

Nachwuchskräfte

Erste Berufserfahrung und volles Engagement: Unsere Nachwuchskräfte können aus einer Vielzahl an Stellenprofilen wählen – und ihren Traumberuf finden. Lassen Sie sich aus erster Hand überzeugen.

➤ offene Stellen (142)

Studenten

Interesse an einem Praktikum, bei dem es nicht ums "Kaffeekochen", sondern um Autos geht? Dann sind Sie richtig bei IAV. Denn persönliche Eindrücke sagen mehr als tausend Worte. Erfahren Sie hier, was alles möglich ist bei uns.

➤ Stud. Mitarbeit (52) ➤ Fachpraktikum (66) ➤ Abschlussarbeit (84)

Auszubildende

Wir tun heute etwas für unsere Experten von morgen. Unseren Auszubildenden bieten wir einen spannenden und praxisnahen Einstieg in das Berufsleben. Aber machen Sie sich doch selbst ein Bild.

➤ offene Stellen (10)
